

Super-Fast and Secure Internet Connectivity for your business

Go beyond broadband with a leased line.

What is Lease line?

A leased line is a private high-performance circuit between a customer and a service provider's network for Internet access or as a point-to-point circuit between two sites. It is rented on an annual basis and usually carries voice and data or both. A leased line is not contended or shared and delivers dedicated guaranteed bandwidth straight to the internet backbone. Although more expensive than broadband, leased lines are supported by a comprehensive Service-Level Agreement (SLA) with a guaranteed fix time and a compensation clause.

Lease line vs Standard Broadband

Fibre leased lines give you a dedicated connection to the local exchange, which means the connection is not shared with any other users, unlike broadband. Therefore, your connection won't become slower at peak times - it is solely for your use. Furthermore, leased lines are symmetrical whereas broadband is asymmetrical. This refers to the download speeds and upload speeds - symmetrical leased lines offer the same upload speed as download speed, but asymmetrical broadband will have slower uploads than downloads.

Benefits of Lease Line

Fast and reliable internet connection, guaranteed

A tough and resilient internet connection with guaranteed download and upload speeds.

Wider choice of speed

There is a wider choice of bandwidth selection with the Internet Lease lines, so you can choose the one that suits your needs.

Unlimited data transfers

Because your speed never drops, you can transfer truly unlimited amounts of data at any time of day.

No slow down at the peak times

With lease line you get a dedicated bandwidth from you to ISP which can only be used by you.

24/7 Business class support

By purchasing the lease line from us you get dedicated support whenever you need it.

We have been providing Lease Lines for 17 years

To over 1000 happy customers across the UK.
